Note on the Dispensaries in the North-Western Provinces, for the year 1863.

ART. III.

NOTE ON THE DISPENSARIES IN THE NORTH-WESTERN PROVINCES, FOR THE YEAR 1863.

By THE OFFICIATING UNDER-SECRETARY.

1. At the close of 1863, 97 Dispensaries (including Main and Branch Institutions) were in operation in the North-West Provinces. Of this number nine were new branches opened during the year, the permanency of some of which can hardly yet be counted on.

2. The total income for the year has been made up of the following sums:—

	Rs.	As.	P.
Given by Government, ---	91,880	8	3½
From Local Funds, ---	18,119	7	0
Interest on Investments, ---	7,055	9	10
European subscriptions, ---	8,561	10	0
Native subscriptions, ---	28,562	1	2
Total, ---	1,54,179	4	3½

3. The actual expenditure has been Rs. 1,57,958-9-3½, and, therefore, somewhat in excess of the income. The cost of new buildings, the funds provided for which formed the large floating balance at the end of 1862, produced this excess.

4. The sum realized by subscriptions is somewhat larger than in 1862. In the remarks on the District Returns attention has been drawn to the insufficiency of the support yet obtained by this means for Dispensaries in many Districts. It never was intended, nor is it proper, that Government should be the principal supporter of charitable institutions. Government but led the way, in the expectation that, when the benefits to be derived were known and appreciated, the wealthy and charitable of the community would provide for their support. It has been shown by experience that, where proper measures are taken that support can be obtained. Mr. Inglis in his Report well remarks—"The people are always ready to assist in their support if encouraged in the slightest degree. In fact, the amount of subscription received in aid of the Dispensaries in a District affords a very correct criterion of the interest taken in them by the District Officer." At present great inequalities are perceptible. While Cawnpore, Budaon, Bareilly, Futtehghurh, Futtehpoore, Mirzapore, Oraie, &c., give a subscription fairly proportioned to the Government grant, the wealthy Cities of Agra, Allahabad, Muttra, and Benares, contribute nothing at all.

5. A pleasing feature in the subscription list is the large sum received from European residents. The Magistrate of Meerut says he did not ask Europeans to contribute, because he considered that to support Dispensaries is the duty of the Native population, and that the other calls on the charity of Europeans are sufficiently numerous. Primarily no doubt it is the duty of the Native community; but it is submitted that there is also an obligation on Europeans to help. Aid can be expected from them, not only on the low ground that by the treatment of their servants indirect advantage is sometimes gained, but on the higher ground that the vast and poor population of India have a claim on the charity of their Christian superiors, and that charity will to advantage be given in aid to a Dispensary. To their honor be it said that, when solicited, they have rarely shown backwardness in giving.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

6. The recent modification of the rules regulating the amount of Government allowance, by which it has been fixed in proportion to the sum contributed by the people themselves, will make it necessary to give more attention to the procuring of subscriptions than in some districts has yet been given.

7. Local support will most easily be obtained, and the general success of a Dispensary most surely promoted, by having a sufficiently numerous and efficient Committee, comprising influential members of the Native community. I believe that it will be found that in most of the districts where a fair subscription has been obtained, the Committee is, comparatively speaking, efficient and helped in its realization. On the other hand, where nothing has been got, the Committee is a sham, existing only in name. It is quite possible for a Magistrate to get subscriptions by other means, such as the direct exercise of his personal influence in asking them, or the employment of his subordinates. But by none of these means will an interest in the welfare of the Dispensary be excited. That can be produced only where, by sharing in its management, in the responsibility for the attainment of success, and the credit for it when gained, the leading members of native society come to appreciate its value and to consider it not merely as a Government Institution, but as one in which they and their neighbours are concerned. When an interest of this nature is excited, subscriptions will be given with willingness, and there will be some guarantee for their continuance. The influence of the District Officer should be exerted towards the producing of this result.

8. If in all districts an efficient Committee was secured, I consider that it might be safely left to control its own expenditure, and freed from the check which in the recently-issued rules has been reserved for the supervising authority. Even now, although this check has been retained, it is not, I believe, intended to interfere with the Committee in their disposal of the funds supplied by the liberality of the public. Committees having the requisite funds will have the power of entertaining such extra Establishment, and procuring such extra medicines, instruments, and comforts as they may think it right to provide.

9. In no case can the action of a Committee be more beneficial than in that of Branch Dispensaries, where frequently, owing to the distance of their position from the station of the Civil Surgeon, the Native Doctor in charge is virtually removed from all but nominal control. If he is apathetic, negligent, or dishonest, it is difficult to check him. It has been suggested by the Commissioner of Meerut, and the suggestion had been anticipated in the scheme of this Government, submitted to the Government of India by letter dated 9th June, that for all branches Local Sub-Committees should be formed. This ought certainly to be done in the case of branches which are distant from the Station and are separately maintained. If the Sub-Committees are carefully selected, if their proceedings are watched, and if, where deserved, commendation is given, there is reason to hope that the branches will not fail for want of local support, and the possible misconduct of the Native Doctor be checked.

10. I think that it were well if every Dispensary Committee were required to record its Resolution on the Civil Surgeon's Report submitted annually to it, and that a copy of the Resolution should accompany the Report when forwarded to the Commissioner. This I find is done in several Districts of the Rohilkund Division, where the greatest success has been obtained.

11. Of the various schemes for the extension of the benefits of Dispensary treatment to the outlying parts of Districts by the establishment of branches, two require especial notice. The first is that which has been followed in the two

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

Zillahs of Budaon and Cawnpore. In these Zillahs the Zemindars have been prevailed on to agree to the establishment of Pergunnah Branches, and to contribute to their support a small percentage on their jumma, similar to the Educational Cess. The exertions of Mr. Carmichael in the former, of Mr. Lance in the latter, have resulted in the formation of eight self-supporting Institutions. They have been found very successful, and there is no reason why, with similar efforts, a similar extension might not take place in other Zillahs.

The other scheme has now been advanced by Mr. Williams, the Commissioner of Meerut, and is one which, if it can be carried out, has considerable advantages. The Dispensaries are properly charitable institutions, intended primarily to relieve the poor and distressed. As a fact they relieve rich and poor alike. If these patients were withdrawn from able Native practitioners to the injury of their practice, the indiscriminate gratuitous relief would be an evil. At present it cannot so be considered. Still, if anything can be done by Government to hasten the arrival of the time when independent Surgeons may exercise their skill for the behoof of those able to pay, and the gratuitous relief be confined to those needing it, it were well. Mr. Williams' proposal seems a step in this direction. It is to establish qualified Native Doctors in large villages, the residents of which are willing to guarantee three months' salary, to provide them with medicines and a few instruments, and then allow them to charge for the aid and medicines given say 50 per cent. on the cost price. Ultimately, if the scheme succeeds, the cost of the medicines supplied will be recovered to Government. He has found many of the landholders of his Division with whom he has conversed on the subject very favorably disposed towards it, and has no doubt that the Doctor, if competent and attentive, would soon secure a fair remuneration. He hopes that Government will allow a trial to be made and grant the necessary medicines and instruments. The difficulty first pressing is that of getting a sufficient number of really skilled Doctors. The experiment ought not to be attempted with inefficient men. I think it might be tried on a small scale at first, and perhaps under Mr. Williams' own auspices.

12. In remarking on the expenditure, the diet and bazaar medicine charges may seem to have been too prominently noticed. The object has been principally to call attention to the inequalities between different districts in the *ratio* of these charges to the number of patients. There may be good and sufficient reasons for these inequalities. I believe that they may in most cases be satisfactorily explained. The returns do not give sufficient information on the length of attendance, &c., for the decision of that point. Many in-door patients also supply their own food, so that calculations based on the total in-door attendance must be more or less fallacious. There is, however, reason to think that, in some cases, the highness of the charges is due to the carelessness or dishonesty of subordinates, and that in most the action of Committees in supervising the economy of the Dispensaries they are nominated to manage requires to be stimulated.

13. During the year there were treated the following number of patients:—

<i>In-door.</i>	<i>Out-door.</i>	<i>Total, with balance of 1862.</i>
13,023	5,14,060	5,32,498

There has been a large increase in the number of out-door patients. Doctor Cutcliffe, in his Report on the Meerut Dispensary, thinks that this is no sure proof of success; that it is merely a sign of greater willingness to accept medicines gratis; that the only proof of real progress is an increase in the number of surgical operations. If Doctor Cutcliffe is sceptical of the value of drugs in the treat-

ment of diseases of the constitution, and thinks them as useful when dispensed empirically by a Native Hakeem as when dispensed under the guidance of such knowledge of European science as the Sub-Assistant Surgeon or Native Doctor may have acquired, his opinion is a logical one. If, on the contrary, the Dispensary treatment is assumed to be superior, the extension of it to a greater number of patients is for that simple reason a success. Still more so the extension of its benefits to those who, like a large part of the usual attendants at a Dispensary, would have had otherwise no advice at all. The *eclat* of successful Surgical operations, and the visibility of the connection between the skill and the success, have generally in any new locality quickly gained for European Surgery an acknowledgment of its superiority, but the European treatment of disease has more slowly gained acceptance and prevailed only as its advantages were realized. It may, however, be admitted that, where the number of operations remains very small, this result must be due to lack of skill or a lack of zeal on the part of the several Officers in charge, and is an indication of the absence of success in that department where it ought to have been attained most signally and most easily.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

14. *Operations*.—The number of operations during the year has been—

Successful,	---	---	---	33,829
Unsuccessful,	---	---	---	209
Total,	---	---	---	34,038

From the incompleteness of the Returns it is impossible to say how many of these were important, and how many of a minor nature. The Returns show considerable differences in the mode of enumeration. Some do not give the minor operations at all, and others include those of the pettiest character. Former instructions on this point ought to be attended to more carefully.

15. *Vaccination*.—There were altogether 21,745 persons vaccinated by the Dispensary subordinates, of whom 16,518 were vaccinated successfully. The recent extension of the special agency for vaccination will, for the future, render the action of the Dispensaries in this matter of comparatively little moment.

16. *Apprentices*.—Most of the Civil Surgeons who touch on the question of Apprentices agree in thinking that the system as a means of training candidates for the Medical School at Agra is a failure. After obtaining some proficiency in the manual part of their work, the youths draw back and refuse to go to the School. There is no reason to think that the prospects of the Medical School will be injured by the omission of Apprentices from the Establishment sanctioned for the future.

17. *General*.—This review of the position of Dispensaries is but a limited one. It embraces their financial position, and what we may call the external mark of success—the number of patients treated. But it contains no information as to the character and prevalence of the diseases with which the Surgeons had to contend, and the success of the treatment. Several of the District Reports from the Civil Surgeons are said to have contained interesting notices of the diseases prevalent in their neighbourhoods and the mode and results of the treatment adopted. If similar Reports were received from all Districts, if they were digested by one Medical Officer, say an Inspector-General of Dispensaries, a valuable and comprehensive annual review of the sanitary condition of the whole North-Western Provinces might be obtained by Government. The advantages of such a review are so self-evident that I need not attempt to describe them.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

The same Officer might also, if he had the opportunity, inspect the Dispensaries, and from the experience thus gained might be able to give valuable hints to the Local Committees. In the Central Provinces this duty has been assigned to the Inspector-General of Prisons. It is one argument for his selection that he would have the means of comparing the Returns from his Jails and the Reports on the diseases prevalent amongst the general population, and thus perhaps be able to deduce some valuable conclusions.

MEERUT DIVISION.

18. **DEHRA DHOON.**—There are in this District a Dispensary at Dehra, a branch at Kalsee, and another at Mussoorie. The last is rather an independent Dispensary, and will be noticed separately.

19. The Commissioner considers Dehra Dispensary to be progressing satisfactorily. There has certainly been a great increase in attendance. The benefits of the treatment have been more appreciated; but, on the other hand, nothing seems to have been done to keep alive the interest in the progress of the Institution, which is the guarantee for its continued support.

20. The expenditure at Dehra has exceeded the income. The amount of European subscriptions has diminished from Rs. 128 in 1862, to Rs. 92, and of native subscriptions from Rs. 54 to nothing. Dr. Hutchinson says the Tehseeldar refused to circulate a subscription paper as on former occasions. This ought to have been brought to the Superintendent's notice at once. I may add that, had the Dispensary Committee been of any use, recourse to the Tehseeldar would have been unnecessary.

At Kalsee the whole expenditure has fallen on Government, a result not contemplated when this branch was sanctioned. It requires explanation why the floating balance at the end of 1862 was Rs. 204, and in this year's accounts appears on 1st January, 1863, as only Rs. 142-0-2.

21. The expenditure shows increase in the item of Establishment, as the present pay of the Native Doctor was drawn for only one month of 1862. The increase in the diet and medicine charges is fully warranted by the increased attendance. The Kalsee medicine charge, which last year was noticed unfavorably, shows improvement. While the attendance has greatly increased, this charge has fallen from Rs. 34 to Rs. 20-14-8.

	Dehra.			Kalsee.		
	Rs.	As.	P.	Rs.	As.	P.
Establishment,	1,620	0	0	144	0	0
Diet,	103	9	0
Medicines,	104	5	5	20	14	8
Repairs,	62	5	1
Contingencies,	78	10	0
	1,568	13	6	164	14	8

22. **Patients.**—There has been a very large increase in the attendance at Dehra. As no unusual sickness prevailed, this can be explained only by the greater popularity of the Institution. At Kalsee the former inefficient Native Doctor has been removed. Under his successor already some improvement is visible.

	In-door.	Out-door.
1862, ...	173	2,879
1863, ...	176	8,739

23. **Operations.**—Here also large increase is shown. They have risen from 168 to 705, of which only four were unsuccessful. Twenty-six were important.

24. **Vaccination.**—Shows a slight decrease, but a higher ratio of success. There were 3,689 cases, of which 2,019 were successful.

25. **MUSSOORIE.**—The Commissioner considers Dr. Clarke's Report so interesting that, but for the standing orders on the subject, he would have forwarded it.

The Dispensary Returns confirm the testimony he bears to the great attention and efficiency shown by Dr. Clarke, while Civil Surgeon at Mussoorie.

26. *Accounts.*—The European subscriptions have increased from Rs. 313 to Rs. 1,040. (To this Landour, while supplying many servants as patients, contributed nothing). The native subscription from 0 to Rs. 28. The floating balance has risen from Rs. 359 to Rs. 1,018. This balance will be devoted to repairs of the building, which are urgently required.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

27. The expenditure is on a moderate scale and calls for no remark. The item of Rs. 389-15-10, paid for European medicines and instruments furnished for 1863, appeared in the accounts of 1862. The third item is explained under the next head.

	Rs.	As.	P.	
Establishment, ...	1,308	0	0	
Diet of native patients, ...	41	9	9	
Diet and contingencies for Europeans, ...	127	2	8	
Bazaar medicines, ...	20	11	4	
Repairs, ...	53	8	0	
Contingencies, ...	28	14	7	
Total, Rs. ...	1,579	14	4	

28. *Patients.*—The attendance shows a considerable increase. Many serious cases of the servants of Europeans were treated at their homes. The Hill population resorts freely to the Dispensary. But this year the number of Plains' patients slightly preponderated, in consequence of the increased number of European residents. Four European patients were admitted. Two of them were men from the Plains, thrown out of employment by severe illness, and thereby deprived of means of subsistence. They left restored to health and able to work for themselves and their families. One end of the building was fitted up as a separate ward for them. The good effected in these cases suggests to Dr. Clarke the hope that, in a few years, the Institution may be able to afford relief on a more extended scale to European workmen stricken down by disease in the Plains. The Commissioner, believing with him that the localities which contribute sufferers of this class will also aid with funds, intended to address the Commissioners of Allahabad, Agra, Delhi, and solicit their co-operation, and that of Chaplains and the employers of European labour.

29. *Operations.*—Operations show a large increase; from 6 in 1862, they rose to 215, of which 16 were capital.

30. *Vaccination.*—The Vaccination Return also shows a large increase and an improved rate of success. The total number of cases was 964. Dr. Clarke thinks that the prejudice against vaccination has died out within a certain radius of the Station. Sujjad Ali, the Native Doctor, is spoken of in favorable terms.

31. *General.*—Dr. Clarke gives a table shewing the gradual increase year by year in the number of admissions from Zymotic diseases, and remarks strongly on the neglect shown of the simplest sanitary arrangements in Mussoorie, which he considers to be the cause of their increased prevalence. The remarks of Dr. Clarke and the Commissioner might be brought to the notice of the Municipal Commissioners.

32. *SEHARUNPORE.*—The subscriptions increased considerably during the year. Dr. Paske succeeded in obtaining also a considerable sum for the support of two new branches.

European, ...	Rs. 220
Native, ...	637

33. In the expenditure, the items of diet and medicine are very moderate.

On the other hand, the item of miscellaneous contingencies, in the absence of explanation, seems very high. Possibly repairs are included under this head; if so, it is a mistake in the form of the account that should be avoided.

	Rs.	As.	P.
Establishment, ...	3,330	9	2
Diet, ...	31	7	7
Medicines, ...	78	13	6
Miscellaneous, ...	479	12	4
Total, Rs. 3,920	10	10	

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

34. *Patients.*—Of in-door patients there has been a slight, and of out-door a considerable, increase.

In-door,	74
Out-door,	8,765

35. *Operations.*—The number of Surgical operations has considerably diminished. There were only 312, of which three were unsuccessful.

36. *Vaccination.*—The number of Vaccination cases has slightly decreased, but the number attained is still large and satisfactory, so also is the ratio of successful cases.

Number of cases,	...	5,557
Successful,	...	4,007

37. *Branches.*—On the 1st January, 1864, two branches were opened under the charge of 4th Class Native Doctors, one at Joalapore, near Hurdwar, the other at Deobund, 20 miles south of Seharunpore.

The Joalapore branch seems to have been very successful, and to have had a most numerous attendance. No less than 8,225 patients are said to have been treated during the year. The subscriptions towards its support amounted to Rs. 556-15, of which were expended Rs. 546-10-6.

The Dispensary is located in a hired building. Dr. Garden, the new Civil Surgeon, remarks that, with this exception, the requisites for the obtaining of Government aid have been fulfilled.

He hopes in the present year to obtain sufficient funds for the erection of a building, and thus merit Government aid. The grant when applied for must be regulated by the recently-issued rules.

The Deobund branch proved a failure; subscriptions sufficient for only one month's maintenance of it were obtained. It has again begun to revive in 1864.

38. *MOOZUFFURNUGGER.*—The income of this Dispensary is small, but shows a slight improvement on last year. An expenditure of Rs. 200 was incurred in repairing damage done to the out-offices by a flood in the rains. The other expenditure calls for no remark.

	Rs.	As.	P.
European Subscription,	122	0	0
Native,	339	13	0

39. *Patients.*—There was a decrease in in-door and an increase in out-door attendance.

In-door,	...	107
Out-door,	...	4,238

40. *Operations.*—The number of Surgical operations rose from 286 in 1862 to 327, of which only three were unsuccessful.

41. *Vaccination.*—This Return shows a good increase of cases; 1,677 out of 2,411 cases were successful.

42. *MEERUT.*—In this District there are a main Dispensary, a branch in the City, and another at Haupper. The City branch is supported from the funds of the main Dispensary. No separate account of its expenditure is rendered. The income of the main Dispensary shows the increased Native subscription of Rs. 1,079. No subscription was solicited from Europeans, as Mr. Forbes considers that they cannot, with the many other calls on their liberality, be expected to contribute. The argument is not a conclusive one. I have referred to it at more length in the introduction.

43. The expenditure for the year has been heavy. It includes the sum of Rs. 249-14-10 spent in repairs of the building. Still more extensive repairs are yet required. It is stated that subscriptions for the purpose have been obtained by the Magistrate, and that the repairs will in the current year be effected. The other expenditure calls for no remark. The charges for diet and medicine show a slight decrease, which may be due to greater economy.

	Rs.	As.	P.
Establishment,	...	2,880	0 0
Extra Establishment,	...	216	0 0
English Writer,	...	120	0 0
Diet,	...	123	13 0
Medicine,	...	99	7 1
Contingencies,	...	127	14 4
Repairs,	...	249	14 10
Total, Rs.	3,822	1	3

44. *Patients.*—Dr. Cutcliffe and Mr. Forbes differ in opinion as to the success attained in the management of the Dispensary. Dr. Cutcliffe thinks that it did not work well during his absence in England, and was not progressing, because, though the out-door patients increased, the in-door and the Surgical operations did not increase in proportion. This raises the general question of what are the tests of success. Is increased out-door attendance a mark of success? Having noticed this question also in the introduction, we here simply say that we think with Mr. Forbes that it is, and that, judging by this test, the Meerut Institution must be pronounced

successful. The attendance is given in the margin. The number of in-door patients might have been larger, but for the mistake of the Native Surgeon in refusing admittance in one case which had a fatal issue. Precautions have been taken to prevent the recurrence of a similar mistake.

In-door, ...	382
Out-door, ...	14,871
Ditto at branch, ...	8,163

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

45. *Operations.*—The total number of operations is much larger than it was in 1862. It is not stated how many were capital, but from Dr. Cutcliffe's remarks I infer that of this class there has been no increase.

Successful, ...	1,214
Unsuccessful, ...	1

46. *Vaccination.*—There has been a very large increase in the total number of operations and an improvement in the success obtained. The result is extremely gratifying.

Total, ...	8,306
Successful, ...	6,584

47. *Haupper Branch.*—The Haupper Branch is supported entirely by Native subscriptions. The income of the year was Rs. 660. The expenditure, high in consequence of repairs to the building, amounted to Rs 701-4. The deficiency of income was met from floating balance. Considerable amount of good was done at this Institution during the year. There attended 74 in-door and 4,424 out-door patients. 339 operations were performed. There were 649 cases of Vaccination, of which 378 were successful.

48. *BOOLUNDSHUHUR.*—The funds of this Institution are in a satisfactory position. From Europeans nothing was received, but the Native subscription amounted to Rs. 855-6-2, which is more than quadruple the sum obtained in the previous year. It was stated in that year's Report that the people were willing to subscribe to the Dispensary if Rs. 20 per mensem were allowed out of the funds for the support of a Native Hakeem in the city. This was considered by Government an objectionable concession to native prejudice. The expenditure for 1863 contains no charge on account of a Hakeem, and no mention is made of the matter in the Report. It is probable that the people have gained so much confidence in the Dispensary treatment as to have disregarded the condition on which support was promised.

49. At the close of the year there was an invested capital of Rs. 4,000, and a floating balance of Rs. 1,143-5. It is to be regretted that the investment should be in a loan to a private individual, even though thereby the high return of 10 per cent. is obtained. I may remark that at this rate the interest for 12 months ought to be Rs. 400, but apparently only Rs. 280 have been realized. This requires explanation.

50. The expenditure is given in the margin. The charge for medicines is high and above the average of Dispensaries generally. The extraordinary charges seem to include additions and repairs to the building, but this is not stated. Such charges ought to be shown separately.

	Rs.	As.	P.
Establishment, ...	791	10	8
Vaccinators, ...	39	0	5
Diet, ...	63	5	9
Medicine, ...	134	7	3
Contingencies, ...	20	6	0
Extraordinary, ...	352	3	1

In-door, ...	195
Out-door, ...	2,851

51. *Patients.*—The attendance, if not yet large, shows a satisfactory increase.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

52. *Operations*.—The number of capital operations (32) is also satisfactory. It bears a high proportion to the general attendance. They were all successful.

53. *Vaccination*.—The return shows a large improvement both in the total number of cases and in the ratio of success.

Total, ...	7,352
Successful, ...	4,485

54. The Native Doctor is declared to be attentive to his duties.

55. *ALLYGURH*.—There were in operation a main and three branch Dispensaries. The first is maintained by the usual Government allowance and the interest of some vested funds. No subscription was received during the year. The Dispensary Committee must exist only in name. If in reality a Committee exist, the indifference displayed to the welfare and progress of the Institution cannot be considered creditable to it. We may hope that the expectation expressed of a better result in the next year will be realized.

Similarly at Khyr, where a subscription was promised when the erection of a branch was sanctioned, nothing has been obtained. It seems most probable that no effort was made to obtain anything. If it be made without success, it may be a question if this branch should be continued. The Hatras and Secundra Rao branches are supported from invested funds and private subscriptions. The latter bear a fair proportion to the total expenditure.

56. A new Dispensary building has been erected at Hatras at a cost of Rs. 3,386-7-5. The price of the old building will be received and credited in the present year. The total interest due on the Promissory Notes belonging to the Institution was not drawn within the year. This neglect ought not to be repeated. The yearly accounts ought to include all the income proper for that year.

Total ordinary expenditure.

	Rs.	As.	P.
Allygurh, ...	1,687	0	11
Hatras, ...	362	11	0
Secundra, ...	306	7	9
Khyr, ...	358	0	0

The ordinary expenditure has not varied much from that of 1862.

57. *Patients*.—The in-door attendance at Allygurh has increased from 335

	Out-door.
Allygurh, ...	4,241
Hatras, ...	2,935
Secundra, ...	1,264
Khyr, ...	2,016

Capital operations, ...	20
	1,571

Total Vaccinations, ...	8,268
Successful, ...	5,010

to 350. The out-door attendance at all the Dispensaries has somewhat decreased, so also has the number of Surgical operations. On the other hand, there has been an increase in Vaccination. The decrease in attendance is probably owing in part to the misconduct of some of the Native Doctors in charge. Ghasee Ram, at Allygurh, was dismissed for dishonesty. Chand Khan, his successor, was removed for inefficiency. At last a Sub-Assistant Surgeon has been obtained, and it is stated that since his arrival there has been a progressive increase in the number of both in-door and out-door patients. The Native Doctor at Khyr was found unworthy of confidence, as he did not keep up his registers daily. He has, however, retained his appointment. On the other hand, the Native Doctor at Secundra is declared to be popular and attentive to his duties.

58. *General*.—At Allygurh, in 1858, a row of private rooms for the accommodation of parties coming from a distance for treatment was erected. The late Lieutenant-Governor, on his visit to Allygurh, expressed his approval of them. Last year, in reviewing the operations for 1862, they were, perhaps from a partial misapprehension of their object, condemned as tending to convert Dispensaries into Hospitals, and thereby throw a heavy expenditure on Government. I do not think this consequence need be dreaded. The want of some house near the Dispensary, in which the ailing who come from the country with friends to tend

and provide for them can be lodged, has been felt in many quarters. There is no reason to think that any expense will be incurred but that required for the building and repairs. I think the Committee may be encouraged to cause the repairs said to be urgently needed for these rooms to be given, and no objection need be made to the erection of similar apartments where the Committees have funds available for the purpose.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

AGRA DIVISION.

59. *MUTTRA*.—Since the sale of the old building in 1859, the Dispensary has been located in a hired house. Great and unexplained delay has occurred in commencing the erection of a new building. The Committee have for several years had ample funds in their possession. As, since the close of the year under review, a site appears at last to have been obtained, and during the past year the sum of Rs. 2,627-15 has been expended towards the erection of a new building (possibly in the purchase of materials: no information is derivable from the accounts or Report), we may hope that before long a building may be abandoned which the present Medical Officer declares to be "small, ill-ventilated, dirty, and expensive."

60. *Accounts*.—At the close of 1862 this Dispensary had an invested capital of Rs. 12,000 and a floating balance of Rs. 22,277-4-3. So early as 21st January, 1861, His Honor, after inspecting the Dispensary, had directed (G. O., No. 115 A.) that from the floating balance a sum not less than Rs. 10,000 be appropriated to the erection of a new building, and the remainder, after paying for a site, be invested in Promissory Notes, the interest of which should be devoted to the diminution of the Government grant *pro tanto*. Immediately on receipt of this order, Mr. Best, then Magistrate, went on leave. It was not carried out till his return. In June 1863, two Promissory Notes with interest due thereon were purchased for Rs. 9,698-8-8. The invested capital was thereby raised to Rs. 20,000. The interest on former investments was drawn and credited to the floating balance; Rs. 3,492-10 were drawn from Government during the year. Considering that, by G. O. No. 2627 A., dated 5th October, 1861, the Government allowance was reduced to Rs. 195, it requires explanation why the Committee has drawn, and been permitted to draw, in excess of that sum. No subscriptions have been received. The Civil Surgeon thinks that this is explicable as far as he is concerned by his want of influence in the district. Had he applied to the European residents he might have received something, notwithstanding his want of local influence. I remark that the list of the Committee contains the name of no native. Where this is the case, and where at the same time the Magistrate does not personally exert himself to get subscriptions, a Civil Surgeon cannot be expected to get much from the native community.

61. The amount of ordinary expenditure during the year has been Rs. 3,552-10.

	Rs.	As.	P.	
Establishment, ...	2,856	0	0	The whole (even the rent of the building) has been paid by Government, except the sum of Rs. 60 taken from the floating balance for miscellaneous expenses.
Diet, ...	151	6	6	
Medicine, ...	207	5	3	
Rent, ...	240	0	0	
Miscellaneous, ...	97	14	3	

62. *Patients*.—There were 129 in-door and 7,025 out-door patients treated during the year, showing an increase in the former class of 30, and a decrease in the latter of 654. The decrease is attributed to the general healthiness of the year.

63. *Operations*.—There were only 19 operations, all capital and all successful. The minor operations were not recorded and reported as ought to have been done.

64. *Vaccinations*.—There were 1,038 successful cases out of 1,590 operated on. This is less than last year. The reason assigned is the arrest of the Vaccinator on a charge of homicide, and the necessary employment of a new man.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

65. The Commissioner states that the Civil Surgeon in his Report gave an account of the principal diseases prevalent in the district during the year.

66. It is to be hoped that the Committee, when they succeed in finishing the new building, may be able to procure subscriptions for its support, and also for the extension of its usefulness by the establishment of one or more branches in suitable localities.

67. AGRA.—The Dispensaries in this district are the Dispensary and Thomason Hospital, and three small branches, all situated in the City of Agra or its immediate vicinity. They are all supported by Government—the former by grants from the revenue, the latter by grants from Nuzool Funds. The Commissioner, in reporting on the operations for 1862, stated that in November of that year he had convened a large meeting of European and Native gentlemen with a view to procure subscriptions. The audience seemed disposed to give donations. "The matter was left in the hands of the Magistrate, and as soon as the collections are made, I trust that they will justify the hopes expressed at the meeting." The result has been that nothing was received. It is not stated why only this result was attained. Did the Magistrate do nothing, or did he ask in vain? It would be interesting to know if the Agra Dispensary Committee ever holds any meetings. It consists entirely of Government officials. It contains no representative of the community at large: no one from the classes whom it is desirable to interest in the working and welfare of the Dispensary.

The present Commissioner suggests that the Native community were not asked to subscribe, because in 1854 (*i. e.*, 10 years ago) they contributed Rs. 7,000 to the erection of the building. The force of the argument is not very apparent. In Districts much poorer than Agra, the people have raised a much larger sum for the erection of the Dispensary, and have then contributed to its support. The want of a subscription is due to a want of interest in the matter; that interest in the Native community will be awakened only by the exertions of the Officers whose duty it is to see that the just expectations of Government in this and similar objects are gratified.

68. The expenditure during the year has been at the Hospital Rs. 9,841-2-3, and at the branches Rs. 1,230-4-2. The expenditure of 1862 is exceeded by Rs. 581-4-4, principally on account of a Sub-Assistant Surgeon's promotion. The charges for dieting, bazaar medicine, and miscellaneous are high. This was explained last year to arise from the occasional admission of European patients, the large in-door attendance, and the fact that the arrangements were more on the model of an English Hospital than an ordinary Dispensary. This may explain the cost of diet and contingencies, but not the charge for bazaar medicines.

69. *Patients.*—The number of patients treated during the year shows an increase at the Thomason Hospital of 52 in-door and 2,029 out-door patients; at the branches of 1,442 out-door patients.

70. *Operations.*—There has been also an increase in the number of Surgical operations. The return does not indicate their nature. Those performed at the branches are apparently minor.

71. *Vaccination.*—There has been a slight increase over the result attained in 1862, but the proportion of successful has diminished at the Hospital.

	Total.	Successful.
...	...	2,867
...	...	1,610

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

72. FURRUCKABAD.—A Branch Dispensary has been opened at Kaimgunj, in the north of this District, the inhabitants of which subscribed Rs. 472-9-6 for its support for one year, in the hope that Government will then grant a Native Doctor and European medicines. As Rs. 400 had been spent up to the end of 1863, it is evident that, for the attainment of that object, renewed effort is required.

73. The funds of the main Dispensary are in a flourishing condition. The floating balance, which at the close of 1862 was Rs. 1,266-10-10, had increased by the end of 1863 to Rs. 2,246-3. This result is due to the increase in subscriptions. Exclusive of the Kaimgunj contribution, there was received from natives the sum of Rs. 1,782-8 and from Europeans Rs. 208. The obtaining of this subscription may, in some measure, be due to the fact that the Committee is a numerous and a working one.

74. The expenditure is given in the margin. The Sub-Assistant Surgeon's promotion caused an increase in the charge for Establishment. In the items of diet and medicine at the main Dispensary, there is some reduction, owing (we are assured) to the measures adopted at a Committee meeting held on 26th December, 1862, and to increased care in supervision. The details of the expenditure at Futtehghurh and Kaimgunj are not given. This should be done, for though that expenditure is met entirely from subscriptions, the details are useful for comparison.

	Rs.	As.	P.
Establishment, ...	2,904	0	0
Diet, ...	67	8	9
Bazaar Medicines, ...	125	7	0
	Rs. 3,086	15	8

75. Patients.—The attendance is shown in the margin. That at the Futtehghurh Branch is about the same as in the previous year, and may be considered satisfactory. At the chief Dispensary, which last year showed an out-door attendance more than double of that in 1861, there seems a lamentable falling-off.

	In-door.	Out-door.
Furruckabad, ...	264	12,558
Futteghurh, ...	292	5,629
Kaimgunj, ...	56	2,727
	512	20,904

The truth, however, is that the wonderful increase shown in 1862 was a deception. The Sub-Assistant Surgeon had cooked his registers. This was discovered in 1863. He has been subjected to the very lenient penalty of transfer to Almorah. The number now given can be considered only approximately correct. But there seems no reasons for thinking that there has been any real diminution in the popularity of the Institution.

76. Operations.—Are shown in the margin. Of those at Furruckabad, 28 were capital. At Futtehghurh 27 operations for Lithotomy were performed. The unsuccessful case was one of amputation.

	Successful,	Unsuccessful,
...	2,332	10

77. Vaccination.—Vaccination Return shows an increase of 613 successful cases over that of 1862.

	Total,	Successful,
...	2,242	1,494

78. Apprentices.—One apprentice resigned. The second, for refusing to go to the Medical School, was dismissed. Their successors are giving satisfaction.

79. MYNPOORY.—This is the only district in which there is no Dispensary. There seems at last a likelihood that this reproach on its reputation for charity will be wiped away. The Magistrate is declared to be attempting to establish one.

80. ETAWAH.—During the year, the re-roofing of the Dispensary has been completed. The building now finished is declared to be handsome and substantial. It is capable of accommodating 24 patients. Out-houses are still required.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

81. *Accounts.*—There has been a slight increase in subscriptions. Europeans contributed Rs. 460-8-0; Natives, Rs. 298-12-0. The Native subscription is far from satisfactory.

82. In addition to the sum of Rs. 2,201-4-6 spent on the new roof, there has been an ordinary expenditure of Rs. 1,259-7-4. This expenditure shows considerable increase over that for 1862. The Native Doctor gets Rs. 10 per mensem extra. The diet and medicine charges have increased from Rs. 47-5-0 and Rs. 109-1-6 to Rs. 130-3-9 and Rs. 176-6-10. The increase in expenditure seems hardly warranted by the increase in attendance. Possibly, as European medicines are said to be very little used, there may be a greater consumption than usual of Native medicines.

83. *Patients.*—There was a considerable increase in the number of patients treated, still it cannot yet be considered that in this respect great success has been attained.

In-door,	...	260
Out-door,	...	3,323

84. *Operations.*—The operations were not very numerous; of the important, two were unsuccessful.

Important,	...	8
Minor,	...	123

85. *Vaccination.*—The Return shows the same number of cases as last year, but a lower rate of success.

Total,	...	1,215
Successful,	...	581

86. *Branch.*—An experimental Branch was opened at Bholee, but when on careful inquiry the locality was found unsuitable it was abandoned.

87. *ETAH.*—The Dispensary building was (we are assured) *entirely* destroyed in the rains, but has been repaired at a cost of Rs. 301-9-0.

Financially, the Institution must be considered to have been successful during the year under review. The subscriptions amounted to Rs. 586-14-0, of which Natives gave Rs. 484-14-0. Government paid only for the regular establishment.

88. The expenditure has been less than for the preceding year. The diet and medicine charges have, notwithstanding increased attendance, diminished. The latter is particularly low.

		Rs.	As.	P.
Diet,	...	59	6	1
Bazaar Medicine,	...	30	8	4

89. *Patients.*—There has been a considerable increase in the number of patients treated.

In-door,	...	251
Out-door,	...	3,306

90. *Operations.*—The number of operations has slightly declined. All were successful.

Important,	...	6
Minor,	...	62

91. *Vaccination.*—Shows a large increase. Out of 2,212 cases treated, 1,844, a large proportion, are said to have been successful. In 1862 there were only 370 cases of successful Vaccination.

92. *Branch at Khasgunj.*—On 26th July a Branch was opened at Khasgunj. A building had been erected from the sale-proceeds of confiscated arms. An establishment was experimentally sanctioned by Government, on condition that the amount of the subscriptions should be sufficient to justify its continuance. This condition will evidently be satisfied. Rs. 506-8-0 have been realized during the year. The Branch has been very successful. The large attendance, occurring simultaneously with an increase at the main Dispensary, shows that the Branch has met a local want.

93. The attendance for five months was of 58 in-door and 2,141 out-door patients, giving a higher daily average than at Etah itself.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

94. The expenditure, except that for Establishment, has been met from the subscriptions. Rs. 150 were spent in contingencies required at the opening of a new Dispensary. There were 50 minor operations and 1,161 cases of Vaccination, of which 900 were successful.

95. *General.*—The Commissioner on his tour found both Institutions comparatively speaking efficient, but was astonished to learn that there was no Committee. He has called upon the Joint Magistrate to submit a list.

ROHILCUND DIVISION.

96. *BIJNOUR.*—The Returns from this District were not received by the Commissioner until the 3rd of March, and were then found so defective that they had to be returned for correction. The cash accounts reached him only on the 7th April. This delay requires explanation. It indicates an indifference by no means creditable.

97. Although a main and two branch Dispensaries have been established in this District for several years, very little is yet done for their support by the people themselves. The branches are still located in hired houses. The subscription for the whole District was only Rs. 169, while Government contributed Rs. 2,836.

	Total expenditure for the District.	Rs.	98. The ordinary expenditure shows a slight increase. This is partly accounted for by the repairs of the Bijnour building.
Establishment,	...	2,453	
Diet,	...	144	
Medicines,	...	122	
Repairs,	...	314	
Contingencies,	...	117	
Extraordinary,	...	88	
	Total, Rs.,	3,238	

99. *Patients.*—The return of patients shows for the whole District an increase of seven in the in-door and a decrease of 1,225 in the out-door attendance. The total number of patients is considerable, compared with the attendance in many districts out of Rohilcund; but for this Division it is small, and the Commissioner thinks that there is no reason why it should not equal that at Shahjehanpore.

	In-door.	Out-door.	100. <i>Operations.</i> —The return of operations shows a decrease in the number of minor cases.
Bijnour,	147	2,894	
Nageena,	252	2,017	
Nujeebabad,	185	3,455	
	584	8,346	

101. *Vaccination.*—The Vaccination Return naturally shows a considerable diminution in the number of cases, as the Vaccinators have been transferred to the Establishment of Dr. Pearson. The total number of cases was 1,013, of which 619 were successful.

102. *MORADABAD.*—The income shows improvement in the item of native subscriptions. They have increased from Rs. 155 in 1862 to Rs. 649 in 1863. This has allowed the increase of invested capital from Rs. 1,300 to Rs. 1,705-8. The Kasheepore branch is still maintained solely by Government. Mr. Inglis, in his Report for 1862, wrote* in a hopeful

* I hope next year to be able to make a different report. Raja Sheoraj Singh has offered a piece of ground for the erection of a suitable building, and has also expressed his intention to subscribe liberally. Many of the other residents have taken the matter up, and there is no doubt that the funds required will be collected.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

strain of expected assistance from the Native community. His expectation appears to have been disappointed, and in the present Report the subject is not noticed.

103. The expenditure shows an increase in the items of diet and bazaar

		Main. Rs.		Kasheepore. Rs.	
Establishment,	...	3,440	...	408	medicines at the main Dispensary.
Extra do.	...	96	...	0	The latter item is nearly treble of that
Diet,	...	210	...	19	for 1862. Considering that the number
Medicine,	...	300	...	67	of in-door patients has diminished by
Contingencies,	...	98	...	12	one-third, and that of out-door patients

remained nearly the same, the increase in these charges seems, in the absence of explanation, excessive. The attention of the Committee might be called to the subject, and an explanation called for. The reason is perhaps not far to seek. The Civil Surgeon's Report concludes with the significant remark, "that the Committee held no meeting during the year." It is doubtful if the Civil Surgeon, who has been lately removed, can himself have exercised a proper supervision. Should the increase prove explicable only by the supposition of the absence of close supervision, it is not creditable to the Sub-Assistant Surgeon, in whose hands the expenditure is.

104. *Patients.*—The attendance for the whole Zillah shows a slight decrease,

		In-door.		Out-door.	
Moradabad,	...	130	...	16,036	principally in in-door patients, but is
Kasheepore,	...	79	...	1,977	still far ahead of that in 1861, the

famine year.

105. *Operations.*—The number of Surgical operations is very large. The

Lithotomy,	43	Sub-Assistant Surgeon, in reply to
Important,	40	inquiry made by the Commissioner, ex-
Minor,	2,828	plained the increase in minor opera-

tions to be due to the frequent cuppings required in some cases of obstinate and long-continued Rheumatism. Leaving these petty operations out of sight, we must consider the large number of important operations, of which only two were unsuccessful, to be satisfactory.

106. *Vaccination.*—There were 623 cases of Vaccination, of which 367 were successful.

107. *General.*—The Commissioner reports that the building at Moradabad was repaired and much improved last cold season by the addition of two rooms for patients and a good operating-room, and that other improvements will be effected in the present year. But I remark that the accounts show no expenditure for building or repairs. If local funds bore the cost their contribution ought to have appeared as income, and the Dispensary accounts ought to have shown the expenditure. Farther, when the Commissioner inquired the reason of the large decrease in in-door patients (from 195 to 130), Mr. Manderson replied that it was owing to defective accommodation, which would be remedied when funds were available. It is not very clear how a large increase to the accommodation available in 1862 can be considered a good reason for the decrease in reception in 1863. The reason appears to have been assigned without much thought.

108. *BUDAON.*—The Commissioner gives well-deserved commendation to the great interest taken in the Dispensaries of his District by Mr. Carmichael. The result appears in the existence of a main and six branch Dispensaries (four of the latter having been established within the last five years), and in the great increase in attendance. The successful working of them is also attributable

to the zeal and attention of Dr. Harris. The last branch was opened at Ooseith in May, 1863, and has since been well attended. Another is in course of erection at Islamnugger from Municipal Funds.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

The income shows a Government allowance of only Rs. 2,777, a receipt from Nuzool Funds for building purposes of Rs. 3,500, and a native subscription of Rs. 2,889. This includes a special item of Rs. 507, raised by the Suheswan people in order to merit Government aid. The expenditure shows the items noted in the margin for building.

109. The charges for diet and medicines are Rs. 298 and Rs. 478. They cannot be considered high, considering the vast number of patients relieved.

110. *Patients*.—The return of patients shows at particular branches slight variations from that of last year. They may be due to local causes or to the opening of another branch at Ooseith. But for the whole Zillah the attendance is much in excess of that for 1862, and presents a result extremely gratifying.

	In-door.	Out-door.	
Budaon,	311	8,596	
Branches,	749	28,419	
	<u>1,060</u>	<u>37,015</u>	

111. *Operations*.—The return presents a number of important operations largely in excess of that for 1862, and far surpassing the number performed in any other District in these Provinces.

Lithotomy,	87
Other Important,	206
Minor,	3,794

112. *Vaccination*.—Vaccine operations also present a very satisfactory result. For the whole Zillah there were 10,646 cases, of which 7,529 were successful.

113. *BAREILLY*.—During 1863 it was necessary to withdraw Rs. 3,000 from the invested capital of Rs. 20,000, to provide funds for the completion of the new Hospital for infectious diseases. The amount realized by subscriptions was Rs. 533 from Europeans and Rs. 1,038 from Natives, showing in both cases an advance on the sums obtained last year, and forming with the interest of the invested funds a fair equivalent of the Government contribution. Aonla and Beesulpoor branches are supported—partly from separate vested funds and partly from that of the main Dispensary. Buheeree and Pilibheet receive aid from Government and the main Dispensary. They do not appear to receive any local support. The Committee hope that, as in the case of Beesulpoor the usual conditions of obtaining Government aid have been complied with, the aid will be quickly granted. The matter is by a separate reference already under the consideration of His Honor, and will be settled on the principles recently adopted for the grant of Government aid. There are in the City of Bareilly two small branches, of which no separate returns are made. The Committee propose to build out of the floating balance a small edifice for one of them and to abandon the present hired house. The appropriation is good.

114. Besides Rs. 5,166-7, spent on the new Hospital, there has been an ordinary expenditure of Rs. 7,820 against Rs. 6,784 in 1862. The excess arises from increased extra Establishment at the main Dispensary and extensive repairs of all the buildings. The other charges have not increased with the increased attendance, nor can they be considered anything but fair for the enormous number of patients relieved.

Diet,	Rs. 319
Medicine,	688

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

115. *Patients*.—This number is not equalled—nay, not nearly approached—by

	In-door.	Out-door.
Barielly and City branches, ...	653	52,940
District branches, ...	681	49,837
	<u>1,339</u>	<u>1,02,777</u>

the attendance in any other District of these Provinces. It has increased at a wonderful rate every year since the mutiny. It this year exceeded 1,00,000 and formed one-fifth of the

attendance of the whole North-West.

116. *Operations*.—The number of Surgical cases is proportionately large.

Lithotomy, ...	70
Other important, ...	120
Minor, ...	4,274

Successful bore to unsuccessful the ratio of 99·78 to 0·22.

117. *Vaccination*.—This Return also shows great progress. There were 15,948 cases, out of which 10,326 were successful.

118. *General*.—The Commissioner trusts that, for the results shown in these Returns, Dr. Corbyn, to whose exertions they are due, may receive the favorable notice of Government. Certainly the Dispensaries of this District may be pronounced the most flourishing in these Provinces.

119. *SHAHJEHANPORE*.—The main Dispensary has no vested funds, and but a very small income from subscriptions. Europeans gave Rs. 50, Natives Rs. 118-4. Even this is an improvement, as the latter in the former year gave nothing. It is stated in the Civil Surgeon's Report that the Dispensary requires a thorough repair. It is to be hoped that the zeal of the Local Authorities will be able to procure sufficient funds. The Branches at Goolaria and Kuttra have each an invested capital of Rs. 8,000, but the income from this was not sufficient for the expenditure of the former. The deficiency was met from the Kuttra and main Dispensary funds. The total expenditure has been Rs. 3,313, and exceeded that of 1862 by Rs. 256. The increase affects all the items.

120. *Patients*.—The attendance has been steadily increasing during the past

	In-door.	Out-door.
Main Dispensary, ...	211	11,565
Branches, ...	180	7,131

three years, and for a Dispensary out of Rohileund would be counted good.

The Commissioner thinks it still less than it ought to be.

121. *Operations*.—Surgical operations show a slight decrease. Three lithotomy

Lithotomy, ...	26
Other important, ...	82
Minor, ...	552

cases were fatal, all other operations were successful.

122. *Vaccination*.—The Return shows an increase. There were 3,499 cases, of which 2,840 (a large proportion) were successful.

ALLAHABAD DIVISION.

123. *CAWNPORE*.—No new branch has been opened this year, but that at Ghatumpoor, one of the Pergunnah branches established through the exertions of Mr. Lance, appears for the first time in the Returns. There are now three of these Pergunnah branches in operation. Judging from the number of patients relieved, they have attained a marked success.

124. *Accounts*.—The Committee commenced the year with the large floating balance of Rs. 4,522-12-10½. This they supplemented from surplus income, and were able thereby to invest Rs. 5,996-5-9 in Government Promissory Notes for Rs. 6,000 at 4 per cent. The subscriptions have fallen from the high figures obtained in 1862, viz., Rs. 700 in the case of Europeans and Rs. 6,056-12-3 in that of Natives, to Rs. 571 and Rs. 1,763-2-7 respectively. The effort of 1862 may be considered an abnormal one, and above the standard that can be ordinarily reached.

On the other hand, the present year's subscription, though, compared with that of most districts, a good one, may, with the knowledge of what Cawnpore can do in response to well-directed efforts, be considered below it.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

The subscriptions from zemindars to the branches have somewhat increased. The Government grant has increased by the pay of two Doctors, at Derapoor and Bhogneepoor.

125. The expenditure was Rs. 5,783-14-7½, as shown in the margin. The details are not given for the branches.

Paid by Government.			Rs.	As.	P.
Establishment main Dispensary, ...			2,961	14	0
Part of house-rent, do., ...			300	0	0
Diet, do., ...			192	0	0
Bazaar medicines, do., ...			99	11	0
Miscellaneous, ...			46	1	6
Two Native Doctors, for Derapoor and Bhogneepoor, ...			600	0	0
			<u>Rs. 4,199</u>	<u>10</u>	<u>6</u>
Paid from subscriptions, diet (miscellaneous), additional, ...			295	13	6
Rent of main Dispensary, ...			1,284	6	7½
Establishment, diet, medicines, &c., at branches, ...			1,580	4	1½

It is anomalous to have the separate item of Rs. 192 for diet and to lump up more expenditure on the same account with other miscellanies in the one item Rs. 295-13-6. This prevents any accurate comparison of the different charges of this Dispensary with those of others. The expenditure should not be arranged by the funds from which it is paid, but the head under which it is incurred.

126. *Patients.*—There has been a large and satisfactory increase in the total admission of patients during the year. This is due principally to the opening of the Ghatumpoor branch and an increase at Derapoor. The total for the year is 826 in-door and 17,648 out-door patients.

127. *Operations.*—The number of Surgical operations was 1,567, of which only one was unsuccessful. Only eight of the whole were capital.

128. *Vaccination.*—The Return shows considerable progress. Out of 2,580 cases, 50 per cent. were successful.

129. *FUTTEHPOOR.*—This Dispensary has received from Government only Rs. 856, the pay of the regular Establishment. The other charges are met from the subscriptions, which, though somewhat less than for 1862, are ample. At the close of the year there was a floating balance of Rs. 3,524-12-4. The sum of Rs. 3,500 has since been invested in Government securities.

130. The charges in the margin seem high, considering the number of patients relieved; that for diet shows an improvement on last year's Return.

131. *Patients.*—There has been a decrease in the in-door, but an increase in the out-door, attendance. The total exceeds that of the previous year. It has been increasing slowly since the mutiny, but cannot yet be considered to indicate much success.

132. *Operations.*—The diminution in the admission of in-door patients may be due to the cause which is supposed to have affected the number of Surgical operations. They have diminished from 264 in 1862 to 108 in 1863. Dr. Sheetz states that the Native Doctor, formerly in sole charge of the Dispensary, was pensioned in April. No successor has yet been appointed to the separate charge. This hardly seems a valid excuse for the large falling off. The detail of capital and

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

minor cases was not given in the Report, but was afterwards furnished on the requisition of the Commissioner. It shows that 15 were capital and 93 minor, besides which 15 cases of fracture and 78 of wounds were treated.

133. *Vaccination*.—A Vaccinator having been appointed during the year, the Return shows some progress. Still there were only 329 cases, of which 194 were successful. In 1862 there were 56 cases. The Commissioner trusts that prejudice against vaccination, on which Dr. Sheetz remarks, will soon be overcome, as Sheikh Ahmud Buksh, a wealthy zemindar, is reported to have come forward to use his influence for its extension in his own zemindaree. "Should his efforts be successful, which no doubt they will be if he is earnest, he will deserve the approbation of Government." The results of his efforts should be given in the next Report.

134. *ALLAHABAD*.—Besides the Colvin Hospital, three branches in the suburbs of the City, and three in various parts of the District, viz., at Phoolpoor, Shahpoor, Bara, have been in operation during the year. The income has been marked by the entire absence of subscriptions. In this respect Allahabad may now vie with Agra. Formerly it did contribute a little, but this year, even the yearly subscription promised to the Shahpoor branch by the landholder in whose estate it lies has not been paid. Now Government, directly or by grants from local funds, supports all. The suburban branches have a small sum invested. The Dispensary at Bara was established as an exceptional case in a notoriously poor and unhealthy locality. Another has been recently sanctioned, on the same terms, to be erected at Mega, in Khyragurh; subscriptions for these are not expected. The others

	Rs.	As.	P.

European do. for Shahpoor, ...	30	7	0
Miscellaneous,	177	0	3

ought to receive assistance from the general community.

135. The expenditure for the year is shown in the margin.

136. <i>Patients</i> .—The attendance at the various Dispensaries has varied considerably from that in 1862. While the Colvin Hospital (in a special manner), Daragunge, and Kydgunge branches, show a great increase, the other branches show a large falling off. The attendance at Bara (opened in end of 1862) has been fair. The total of all the Dispensaries shows a large and satisfactory increase. It would be interesting to know if any of the variations in the attendance at the

Shahpoor,	59	
Bara,	172	

branches could be connected with changes among the Native Doctors, or if any other reason can be assigned for them.

137. *Operations*.—Of the minor operations performed at the branches no record is kept. At the Hospital there were 3,899, of which 26 were capital. Three were unsuccessful.

138. There is a slight falling-off in the number of vaccination cases, but an improvement in the proportion of good results.

139. *BANDA*.—At the beginning of 1863 there was a floating balance of Rs. 3,533. Government approved of the investment of Rs. 3,000 of this sum

for the endowment of the Kirwee branch. This the Committee have neglected to do. The Commissioner has called attention to the subject, and suggests that the floating balance, having increased to Rs. 4,305, besides a surplus at Kirwee, the investment be increased by another Rs. 1,000. This should be done at once.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

140. The financial position of both this Dispensary and the Kirwee branch is very good. The subscriptions wholly from Natives have been from Banda Rs. 1,257-6-6, and from Kirwee Rs. 528-6-6. The expenditure is on a somewhat higher scale at the branch than at the main Dispensary. It is given in the margin.

	Banda.			Kirwee.		
	Rs.	As.	P.	Rs.	As.	P.

	In-door.			Out-door.		
	Rs.	As.	P.	Rs.	As.	P.
Banda,	5,252
Kirwee,	2,602

142. *Operations.*—There is also an increase in the number of operations. Those performed at Kirwee are all of a minor nature, and exceed the number performed at Banda.

	In-door.			Out-door.		
	Rs.	As.	P.	Rs.	As.	P.
Banda,	208
Kirwee,	212

143. *Vaccination.*—The number of cases at Banda again shows a decrease. Kirwee last year showed none. This year it gave fifteen, of which eight were successful. The prejudice and ignorance of the Bundelkhund population account for this want of success.

	In-door.			Out-door.		
	Rs.	As.	P.	Rs.	As.	P.
Banda, total,	257
Successful,	163

144. *General.*—The Magistrate expresses a hope of being able during the current year to establish a branch at Kallinjur.

145. *HUMEERPOOR.*—The income shows a slight improvement. The native inhabitants, who in 1862 gave nothing, have this year given Rs. 272. This and the European subscription sufficed for all expenditure except that on Establishment, which is maintained by Government at a cost of Rs. 828. The medicines and diet charges show an increase commensurate with that in the attendance.

146. *Patients.*—The attendance, though still small, is double that of the previous year, and gives hope that ultimately such success as can be expected in the difficult situation it occupies will be attained.

	In-door.			Out-door.		
	Rs.	As.	P.	Rs.	As.	P.
In-door,	112
Out-door,	1,265

147. *Operations.*—The number of Surgical operations has more than doubled. There were 66; all successful.

148. *Vaccination.*—Of vaccination there were 98 successful cases, which is 33 in excess of the number shewn last year. Considering that a paid Vaccinator is maintained on the Establishment for the whole year, this result, notwithstanding the strong prejudices of the Trans-Jumna population, is somewhat disappointing.

149. On 6th October, 1863, a branch was opened at Raat in an old Tehseel building. Humeerpoor is in the rains cut off from the rest of the country by broad rivers. This rendered the establishment of a branch very advisable. Rs. 880 were subscribed by natives for the support of one at Raat. As yet Government has given no aid, but a Native Doctor has been promised if the Institution is maintained for a year. The success of the new branch is very encouraging. In the three months it has been open, 723 out-door patients have been treated. The funds on hand will suffice for more than a year's expenditure.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

150. *General*.—Dr. Raddock (it is stated) has furnished a long Report on the diseases prevalent in the Humeerpoor district, with various data connected with the subject.

BENARES DIVISION.

151. *AZIMGHUR*.—During the year a house for the Sub-Assistant Surgeon has been completed, and a new Dispensary has been building. The Commissioner considers that they have been designed by Mr. Lushington on far too large a scale, and he has to regret that the work was commenced without the requisite sanction. The original estimate of Rs. 10,011 submitted to him was rejected as too high. The second showed an increase of Rs. 3,489 on account of ornamental improvements. He has now had this modified, and it is considered that the edifice, on which Rs. 9,088 have been spent, can be satisfactorily completed with a sum of Rs. 2,919-12-3, deposited with the Collector for the erection of a grain market, which is now considered by all to be unnecessary and the site chosen for it a mistake. The Commissioner recommends that this sum (the source of which, probably a local fund, is not given) be appropriated to the completion of the Dispensary. The Dispensary is located at present in the Sub-Assistant Surgeon's house.

152. The present Sub-Assistant Surgeon is of a lower grade than his predecessor; this has reduced the Government allowance. The subscriptions were from Europeans Rs. 210 and from Natives Rs. 678-5-5, showing increase of Rs. 97 and Rs. 214-15-2 respectively over the receipts of 1862. The cost of Establishment has diminished as above. The other charges are moderate and varied from those of last year with the variations in attendance.

	Rs.	As.	P.
Establishment,	2,369	12	4
Dieting,	97	5	6
Bazar medicines,	101	15	5
Miscellaneous,	32	0	0
Rent extraordinary,	112	8	0

153. *Patients*.—The in-door patients have increased from 128 to 164. The out-door attendance has diminished from 5,764 to 4,678; this result is attributed to the healthiness of the season.

154. *Operations*.—Ten capital and 450 minor operations were performed; two of the former were unsuccessful. There has been a diminution compared with 1862.

155. *Vaccination*.—574 operations were performed against 338 of the preceding year. About 50 per cent. were successful.

156. *Establishment*.—The present Sub-Assistant Surgeon is new and yet little known, but he shows zeal and is expected to succeed. Two Apprentices were sent to Agra, of whom one passed the entrance examination.

157. *JOUNPOOR*.—The Dispensary here receives from Government only the pay of the regular Establishment. All other expenses are met from subscriptions. It is to be regretted that these have diminished during the year in the case of both Europeans and Natives, and that, in consequence, the expenditure has exceeded the income, and the floating balance had to meet the deficiency. This falling off is said to have arisen from frequent changes amongst the European Officers. Dispensaries will never, as regards their support, be on a satisfactory footing until the management is in the hands of a good Committee, containing some permanent members interested in their prosperity and meeting regularly. It is to be hoped that the current year will show better results in the matter of native subscriptions.

Fitting up ward for insanes, ...	24	3	10	continues successful. It is supported

entirely by native contributions, receiving no Government aid. I regret to observe that its income also has been slightly less than the expenditure. The former amounted to Rs. 256-8-0, the latter to Rs. 276-12-0. The floating balance has thereby been reduced to Rs. 3-5-0 at the end of 1863. A Chowkeedar on Rs. 4 per mensem does not seem indispensable for so small a branch. At very few Institutions is a servant of this class entertained. The funds do not afford it; and if they did, a Sweeper or Apprentice would be more useful.

160. *Patients.*—The attendance at both shows an increase when compared with that in 1862. It cannot

	In-door.	Out-door.
Jounpoor, ...	180	4,901
Muchleeshuhur, ...	180	652

be considered large.

161. *Operations.*—The Surgical operations were not many. There were only 228 at the main, and 28 at the branch Dispensary, and of these only two were major.

162. *Vaccination.*—460 persons were vaccinated, of these 343 were treated successfully. The Civil Surgeon admits that this is a very poor result; but states that great prejudice has to be contended with. He applied for a Magistrate's Chuprassee to accompany the Vaccinator, in the hope that thereby success would be promoted. The Commissioner remarks that probably this request was negatived since, not by authority but by conciliation: "by the influence accruing to Medical men thoroughly in earnest will the prejudices against vaccination vanish." It does not appear how the Vaccinators are paid; they are not entered in the list of Establishment.

163. *Apprentices.*—The Apprentice entertained in 1862 worked well, but was dismissed after a year's service for refusing to go to the Medical School. He has since obtained a situation as Compounder at Mirzapore.

164. *MIRZAPORE.*—Since 6th August a small branch, subordinate to the main Dispensary, has been opened at Nharghat, the chief ghât of the City. The central floor of an empty native house, said to be haunted, has been lent by the owner, on condition that he be excused his usual monthly subscription, a bargaining in charity characteristic of his country. The number of patients (2,737), all out-door, treated at this branch during five months indicates great success.

165. The income is shown in the margin. The Establishment allowed by Government is on a liberal scale. The shop rents pay the ground-rent, and this year left a margin for repairs. The European subscriptions show a decrease of Rs. 13, the Native an increase of Rs. 172-8-0; the amount realized is a fair one, but not equal to what Mirzapore can and ought to do. The expenditure has been Rs. 5,059-3-1. The result is that the Dispensary is financially in a much better position than at the

beginning of the year. Not only have the repairs to the roof of the edifice, which is now likely to stand without repairs for years, been completed at a cost of Rs. 428, a loan taken in the previous year from the local funds been repaid, and the Nharghat branch provided for, but the floating balance has risen from Rs. 100-7-5 to Rs. 357-6-4.

166. The expenditure shows an increase in the items of diet, bazaar medicine, extra establishment, and contingencies. The first is satisfactorily explained by a large increase of in-door patients and the adoption of a more

				Rs.	As.	P.
Diet,	306	12	7
Bazaar Medicines,	231	8	9
Repairs,	1	0	0
Miscellaneous,	1,132	15	10

liberal diet at the wish of the Native members of the Committee. This is a satisfactory indication of an interest being taken in the management. The procuring a better quality of bazaar medicines occasioned greater expenditure on that head; Rs. 190 were spent on new cots and bedding. The Nharghat branch of course required furniture when first opened.

167. *Patients.*—There is a large increase of in-door patients in consequence

			In-door.	Out-door.
Main,	334	11,959
Branch,	0	2,737

of the completion of the repairs, and a decrease of 574 in the out-door. The Commissioner remarks—"No explanation is afforded in regard to the falling off in out-door attendance, but the Deputy Inspector-General of Hospitals considers Sub-Assistant Surgeon Kally Dass, of Mirzapore Dispensary, to be one of the most honest and best men in his Circle, and the Mirzapore statements to be the most accurate he receives." The total attendance is very great; and with this testimony to the correctness of the Returns the amount of relief administered may be considered satisfactory.

168. *Operations.*—There were nine major and 729 minor operations. The major are few in number; four of the former and 42 of the latter were unsuccessful. It is only in the Benares Division that I find unsuccessful minor operations admitted. From a remark in the Ghazeepoor return, I infer that those the issue of which is unknown or uncertain are thus recorded.

169. *Vaccination.*—There were 319 cases, of which 219 were unsuccessful. Dr. Loch, from personal visits to villages, can vouch for the correctness of the return. The operations were checked by the removal of the Vaccinator at the beginning of the cold season. Dr. Loch does not find the system of Apprentices work well. They will not go to the Agra School. They are quite willing to become 3rd Class Doctors, but from their ignorance of Anatomy are less useful.

170. *Branch.*—The Robertsgunj branch has been transferred to Doodhi, 50 miles south of Mirzapore, with a view to secure a larger attendance. It has been located in a hired building, but Dr. Loch hopes soon to get one built for the purpose with more facilities for in-door treatment. It is supported entirely by Government for the benefit of the people of the poor Singrowlee District. The report says the aid comes from the Municipal Fund. I understand the fund is provided from the surplus revenue of the Pergunnah.

171. *Patients.*—The out-door patients have numbered 896, or 139 in excess of the attendance at Robertsgunj in 1862. The operations are of the simplest character. No record of them is kept.

172. *BENARES.*—The Dispensaries in operation in this district are the Native Hospital and its branches in the City and suburbs; 2ndly, Bheloopore, also in the City; 3rdly, Chundowlee, in the district south of the Ganges. The income of

the first shows an apparent decrease. The truth is that all the interest due on invested funds has not been drawn as it ought to have been. In the accounts for both 1862 and 1863 there is entered the very high European subscription of Rs. 1,200. But from Mr. Monteath's Note, I infer that this sum is the proceeds of an old endowment, and no true subscription. In fact, no subscriptions from Europeans or Natives are received. Baboo Gooroodass Mitter was last year thanked by Government for promising Rs. 300 per annum for the support of a City branch. He has paid this sum on account of 1863, but not till the year's accounts were closed.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

173. It is with pleasure we turn to the Bheloopore Dispensary. This Institution, which last year relieved more than 17,000 patients, is supported, with the exception of the Sub-Assistant Surgeon's pay, by the Ranee of Vizianagram. She contributes Rs. 1,800 annually for the purpose. Her age and infirmity preclude the hope that her contribution can be much longer expected. But her son, the Maharajah, has in the most liberal spirit come forward and offered to endow the Dispensary with Rs. 20,000 from the 1st January, 1865. Copy of his letter is sent by the Commissioner, who also remarks—"A similar act of benevolence in connection with the Dispensary at Vizagapatam has lately received special recognition from the Government of India, and I shall be glad if this further instance of enlightened generosity of the Maharajah be brought to the notice of His Excellency the Governor-General."

174. In the case of Chundowlee the monthly subscription of Rs. 40, which the Commissioner formerly expressed the hope of obtaining, has been realized. Baboo Gopal Singh, a landholder, assisted with a donation of Rs. 200. This has enabled Doctor Cheke to secure for it a first-class Doctor.

	Rs.	As.	P.
Diet,	481	12	10
Bazaar Medicine,	430	13	3
Miscellaneous,	291	0	3

175. The expenditure seems to call for no remarks. The items given in the margin are for all the Dispensaries.

176. *Patients.*—The out-door attendance has considerably diminished at the Hospital and its branches. Chundowlee shows similar results to those of the former years, while at Bheloopore there has been increase. The total number at all the Dispensaries, amounting as it does to 579 in-door and 43,037 out-door patients, is still very large.

	In-door.	Out-door.
Hospital,	393	21,846
Bheloopore,	186	16,916
Chundowlee,	0	4,275

177. *Operations.*—The number of important operations is, considering the large number of patients, very small. There were only 14, of these three had a fatal result. The number of minor cases at all the Dispensaries was on the contrary large, 4,495. Here also there is a decrease visible when compared with the returns of the former year.

178. *Vaccination.*—The Return shows a slight improvement. The result is not yet very favorable; out of 1,093 cases 679 were successful. Doctor Cheke considers that the prejudice against vaccination is diminishing amongst Natives of position, but is still strong amongst the poorer classes. Education will account for this.

179. *GHAZEETPORE.*—The European subscription, Rs. 505-9, is a liberal one. That from Natives, Rs. 283-9-9, is both small absolutely and less compared with that of 1862, notwithstanding the efforts said to have been made for its increase.

180. The repairs of the building have been finished at a cost of Rs. 401-2-6 and now extensive repairs ought not to be required for years. The extra Estab-

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

lishment has been increased by one Peon employed to watch lunatics, for whom apartments, separate for cases of mild and those of violent lunacy, have been fitted up in such a way as to prevent annoyance to other patients.

181. *Patients.*—The attendance shows considerable increase over that for 1862. The increase has occurred chiefly at the Civil Station Branch of Peernuggur, opened in 1860.

In-door,	182
Out-door,	9,315

182. *Operations.*—There have been only 351 operations, of which seven were major. One of the major and 83 of the minor were unsuccessful.

The latter appear to be the cases of which the issue is from cessation of attendance unknown. The Civil Surgeon finds amongst the people a strong disinclination to submit to operations, and the Dispensary subordinates do not impress on patients the advantages to be derived therefrom. The Returns show that the same unwillingness does not exist in Rohilcund, or, if it once existed, has now been overcome.

183. *Branch at Bulliah.*—This Dispensary was re-opened in 1862, and has since been highly successful. When it had been maintained by private subscriptions for more than a year Government, from 1st June, 1863, allowed Rs. 40 per month and European medicines. Only Rs. 255-14-0½ have been drawn from Government. Rs. 1,360-1-9 have been realized from Natives by subscriptions. The subscription is a very liberal one, and creditable to the Officer by whose exertions it has been obtained. The expenditure calls for no remark. The medicine charge, Rs. 159, includes the cost of European medicines procured before the 1st of June, 1863.

184. *Patients.*—The attendance has been large. It shows an increase in that for 1863.

In-door,	69
Out-door,	7,386

185. *Operations.*—No operations appear in the Returns.

186. *Establishment.*—Doctor Garden found the Sub-Assistant Surgeon at Gharzeepoor dilatory, and not ready to carry out his wishes in the management of the Dispensary.

187. The Native Doctor at Bulliah bears the highest character for skill and attention. The subordinates of the main Dispensary have done their work in an unsatisfactory way.

188. *GORUCKPOOR.*—There has been a falling off in Native subscriptions to the main Dispensary during 1863 to the amount of Rs. 390. The Civil Surgeon expects a much higher sum to be realized in 1864, "since," he says, "there are now several influential Natives on the Committee, some of whom are exerting themselves in inducing the residents of Goruckpoor to subscribe." There is no doubt that it is by having a good working Committee that a fair and uniform subscription will be most pleasantly realized.

The subscription to the Bansee branch is most satisfactory. The floating balance at the end of 1863 was Rs. 1,218-10-7. Part of this might be invested.

From Europeans,	Rs. 42	As. 0	P. 0
From Natives,	Rs. 821	As. 10	P. 6

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

189. Of the expenditure the only item requiring notice is that for medicines. It is a high one, but not unreasonably so, as it includes the cost of valuable European medicines, the purchase of which is declared to have

	Goruckpoor.			Bansee.		
	Rs.	As.	P.	Rs.	As.	P.
Diet, ...	115	10	6	20	12	6
Medicines, Bazaar,	80	11	8
And European, ...	537	8	11
Miscellaneous, ...	91	6	0	57	7	7

been necessary. The Commissioner supports the Civil Surgeon's statement, and commends the care and vigilance shown by him in the management of the Dispensary. Many able physicians have, I believe, found by experience that, for the majority of diseases treated by them, useful and cheap indigenous medicines are available, and employ them instead of the expensive European substitutes in the treatment of native patients. But there are diseases in which the latter must be used, and amongst these Goitre, for which Doctor Cayley had to treat an immense number of patients, must be reckoned. Even where a similar bazaar medicine is available, I think no objection need be made to the employment of the European drug, with which the Civil Surgeon is more familiar, and in whose operation he has more confidence, so long as expenditure on this head is met from the subscriptions. The authorizing of this expenditure should rest with the Committee, and their decision might safely be accepted.

190. *Patients*.—The attendance at the main Dispensary has been increasing since the mutiny by about 1,000 annually. It now exceeds 10,000. The Civil Surgeon attributes this progress to

	In-door.			Out-door.		
	Rs.	As.	P.	Rs.	As.	P.
Goruckpoor,	152	10,046
Bansee,	28	1,219

the zeal and efficiency of the Sub-Assistant Surgeon, Mahomed Shaik. The Commissioner also bears testimony to his courtesy and obliging disposition. Amongst the patients have been more than 900 who were treated for Goitre. In all great benefit was received; in many a complete cure effected. The number of these cases is increasing every month. The small attendance hitherto at Bansee has been attributed to the lowness of the caste of the Native Doctor. He has now been transferred, and his place taken by a high-caste man.

191. *Operations*.—At the main Dispensary there were 1,020, of which only one was unsuccessful: 63 cases of Lithotomy are included. At Bansee no record appears to have been kept.

192. *Vaccination*.—There has been a slight improvement, still there were only 551 cases, of which 311 were successful. At Bansee there were 40 cases.

193. *General*.—The Civil Surgeon points out the necessity that exists for the erection of additional wards, or a separate building, for the reception of travellers found on the roads dying of disease or starvation, but not considered fit for admission into Hospital. Such a building would also be available for those who come for treatment from a distance, and for want of accommodation sleep in the open air. I cannot understand how travellers found dying of disease should not be considered fit to be admitted into the Hospital. It may be the accommodation in the present Dispensary is very limited. In that case, the addition of other wards might be sanctioned. There is no doubt that a rest-house for patients coming from a distance is very needful, not only at Goruckpoor, but elsewhere. But this ought to be separate from the Dispensary, and not looked upon as forming part of an Hospital. Both questions are for the consideration of the Committee. When they have a definite scheme, definite orders can be given.

194. The Commissioner, in his No. 98, dated 28th October, 1863, reported that the Ranee of Satasee wished to erect and endow with Rs. 50 monthly a Dispensary at Rooderpoor. She has deposited Rs. 600 as an instalment towards the erection of the house, and offered to deposit Government Paper to meet her share of the expense. His Honor, while appreciating her liberality, remarked that, as

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

the general question of the support of Branch Dispensaries was under consideration, no order could for the present be passed on the offer. The Commissioner repeats his hope that sanction will be given.

JHANSIE DIVISION.

195. JHANSIE.—In the year 1862, Rs. 511-14 were subscribed at Mow, the most important town in the district, for the establishment of a branch. A confiscated building was granted by Government. It has been open for the last two months of 1863, but no accounts of its working or of any expenditure there are given. For the main Dispensary Europeans give the liberal subscription Rs. 537-1; Natives nothing.

196. The ordinary expenditure has been Rs. 1,223-15-3. The total, including Rs. 771 spent on repairs, is Rs. 1,994-15-3.

	Rs.	As.	P.	
Establishment,	948	0	0	
Extra,	25	2	7	The dieting charge has increased and
Diet,	152	15	9	seems high. The medicine charge has
Bazaar Medicines,	47	15	5	diminished.
Contingencies,	69	13	6	

197. *Patients*.—The attendance during the year has diminished, but the diminution is satisfactorily accounted for. Of the patients in 1862, 302 were treated for Cholera. In the present year there was no Cholera. The decrease is the consequence of a healthier season.

198. *Operations*.—Major operations, all successful, were performed; minor operations have apparently not been recorded.

199. *Vaccination*.—As in all the Trans-Jumna districts, the result is most insignificant. There were 85 cases, of which 62 were successful. At Mow the Native Doctor thinks his being a Mussulman is a barrier to its extension. The Civil Surgeon intends to visit the place and try to introduce it himself.

200. *Establishment*.—The Native Doctor, Mozuffar Hossein, receives great praise from Doctor Annesley.

201. JALOUN.—In this District there are now three Dispensaries in operation, viz., at Orai, Calpee, Koonch.

	European Subscriptions.			Native Subscriptions.			Local Funds.			
	Rs.	As.	P.	Rs.	As.	P.	Rs.	As.	P.	
Orai,	82			1,330	14	5				The Calpee branch was opened in the
Calpee,				97	10	3				end of 1862, but is now reported on for
Koonch,				163	2	3				the first time; that at Koonch was opened

ed in March, 1863. The former is located in a hired building, the latter in an old Thannah. The income is shown in the margin. The Native subscription at Orai is a very large one. Those at Calpee and Koonch can hardly be considered favorably. The branches could not have been maintained for the year without assistance from local funds. The Commissioner in his report solicits the grant of a Government allowance as essentially necessary for their support. But have they merited it?

202. The expenditure is given in the margin. The charge for dieting at all three Dispensaries seems high and is certainly above the average. Two in-door patients at Koonch cost Rs. 21-4 each. The Commissioner remarks generally—"The patients were dieted at the expense of the Dispensary and were in many instances merely recipients of food and shelter for the remainder of their days, owing to their extreme old age or incapacity for work." This charity may have been well bestowed, but is there not here a misconception of the object of the Dispensary? It is not intended to be a workhouse. The expenditure for medicines at Calpee and Koonch includes the cost of European drugs.

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

203. *Patients*.—The out-door attendance at Orai shows a decrease of 1,305.

	<i>In-door.</i>	<i>Out-door.</i>
Orai,	187	6,789
Calpee,	8	3,413
Koonch,	2	1,801

This may be due to the opening of the branches, which seem to have been very successful. The year too is said to have been generally healthy,

and the healthiness of Orai especially has been improved this year by the introduction of an efficient system of drainage.

204. *Operations*.—There were 226 successful operations, of which two were important.

205. *Vaccination*.—This, as another Trans-Jumna district, shows only 78 cases, of which 49 were successful. Doctor Hatchell thinks that without trained Vaccinators nothing can be done.

206. LULLUTPORE.—No effort seems to have been made to re-open the Dispensary which existed here previously to the mutiny.

207. AJMERE.—The present Civil Surgeon took charge in January, 1864, and consequently can add little to the information to be derived from the Returns. The sums realized by subscriptions were small, being only Rs. 66 from Europeans, and Rs. 266 from Natives. There is entered at the close of 1863 in the accounts a floating balance of Rs. 2,397-0-3. This has gradually accumulated from the savings of the Government allowance and the subscription of past years. The Deputy Commissioner has, by a separate communication, proposed that part of this be credited to Government. It had better be funded.

208. *Patients*.—The attendance is a large one, though less in the out-door part of it by 1,013 than the number for the former years.

	<i>In-door.</i>	<i>Out-door.</i>
... ..	177	11,803

209. *Operations*.—These show a large increase. There were nine capital and 1,017 minor.

210. *Vaccination*.—A small result is shown, though better than in the former year. There were 589 cases, of which 331 were successful.

KUMAON DIVISION.

211. KUMAON.—The Report of the working of the Dispensaries in this and the Gurhwal districts is somewhat meagre. Kumaon contains the two Dispensaries of Nynee Tal and Almorah. The former has branches at Huldwani and Kaleedoongee; the latter one at Petoragurh. The subscriptions to the former are the liberal one of Rs. 747 from Europeans and Rs. 11 from Natives. To the latter, Rs. 240 are set down as contributed by Natives. It represents, I believe, the rent of the Dispensary building, which is remitted by the owner. There is no general subscription.

212. The accounts show an expenditure of Rs. 720-10-1 at Nynee Tal and Rs. 1,016-1-2 at Kaleedoongee, on account of new buildings, but no further information regarding them is given. The Government allowance drawn in 1863 is less than that drawn in 1862 by Rs. 528-3-1; no reason is assigned for this. It is not clear why a Vaccinator is paid from the Almorah Dispensary when the whole Vaccination Establishment has been transferred to the separate charge of Doctor Pearson, and no cases appear in the Returns.

213. *Patients*.—The number of patients at Nynee Tal and its branches requires no notice. But at Almorah, if the Return can be considered correct, there has been a wonderful advance.

	<i>In-door.</i>	<i>Out-door.</i>
Nynee Tal and Branches,	157	4,559
Almorah,	144	10,697
Petoragurh,	23	415

The attendance is double of that for 1862, and in a country not peopled like the Plains is above 10,000, thus ex-

Note on the Dispensaries in the North-Western Provinces, for the year 1863.

ceeding or equalling the attendance at such Stations as Goruckpoor or Mirzapore. The Commissioner can assign no reason but the popularity of the present Hindoo Sub-Assistant Surgeon.

214. *Operations*.—The same remark applies to the operations at Almorah; they have increased from 313 to 794. At Nynsee Tal they have fallen from 85 to three, of which two were unsuccessful. Minor operations must, I suppose, have been excluded from this Return, but no explanation is given.

215. GURHWAL.—The Dispensary at Sreenugger and its branches in the pilgrim route show an increase of attendance. At no separate Dispensary is it large, but the total represents a considerable amount of relief rendered to pilgrims, many of whom must otherwise have perished. The increase is the consequence of the greater influx of pilgrims this year.

The expenditure presents nothing noteworthy.

		Successful.	Unsuccessful.
Sreenugger,	93	4
Branches,	197	1

216. Surgical operations have, on the whole, declined.
